

Measure Skin Temperature accurately using your new or existing Infrareds or Thermal Imagers.

Screening for elevated skin temperature on individuals for the possible existence of the Covid 19 Virus is serious business. Inaccurate devices being used incorrectly is typically the problem. Buying new IR devices is not always practical. Whether you have one or are buying a new device you want to be able to get the most out of your investment.

Palmer Wahl offers a service to assist you in fine tuning your infrared devices to measure skin temperatures more accurately. We will provide you with the proper settings and corrections to screen for normal and elevated skin temperatures. We use a NIST traceable Transfer Standard to accurately calibrate your unit. We provide a certificate that shows the accuracy offset, the emissivity, alarm, if available on your unit, and a label on your device so you always have the correct settings to be used when screening individuals. The result is the ability to maximize protection of all your employees, clients, guests and friends.

If you are looking for a new solution to measure skin temperature, our lineup of temperature screening products is below. We offer a broad product line for virtually any situation or budget. Our Skin Temperature calibration can be purchased with your new product or any time after.

If you have an existing infrared or thermal imager you would like to utilize for skin temperature measurement simply go to palmerwahl.com and click on Request an RMA and follow the instructions. You may also call now at: **1-800-421-2853** or email us at sales@palmerwahl.com and schedule your unit to be calibrated. We will calibrate any device and return it to you within days.

Important Note: Single Point Infrared Thermometers and Thermal Imaging cameras are not medical devices and cannot be used to detect or diagnose COVID-19/Corona virus. They are useful tools to determine if someone has an elevated skin temperature.
